

KEEP YOUR VEHICLE SAFE & LEGAL WITH OUR NEW BRAKE ROLLER TESTER & SHAKER

The VIS-Check heavy vehicle inspection product analyses vehicle efficiency and roadworthiness using advanced vehicle inspection technology meeting regulatory authority standards for road registration requirements.

The dynamic road simulator allows us to quickly diagnose and inspect steering and suspension components throughout the vehicle. King pins, bearings, suspension bushings, cab mounts, tie rods and all other undercarriage components can be quickly inspected.

We also perform a Brake Roller Test on your vehicle and provide you with a printed report of your brake test results.
